## **New CADalog from Progressive Components Offers Mold Designers Convenience and Selection**

**Wauconda, IL – June 12, 2019** - Nearly 30 years ago, Progressive Components became the first component supplier to offer free CAD geometry for mold designers and has continually added products and formats since that time.

Today, the company is proud to announce significant advancements to an already extensive CAD Library that includes new file formats and download options.

Introducing the new CADalog, a streamlined method to receive the entire Progressive Components catalog of CAD geometry in the file format of choice, either as a USB drive or online download option. Designers who receive the CADalog USB will receive notifications as new products are released and have the opportunity to download just the newly added components for easy updating.

“Progressive has added new file formats including native VISI and NX libraries, built by software and industry experts specifically for mold designers,” states Kevin Kelly, Project Engineer at Progressive. “By offering native SolidWorks and NX in both MoldWizard and ReUse libraries, our CAD is seamlessly inserted into mold designs.”

Please visit [www.procomps.com/CAD](http://www.procomps.com/CAD) to request your CADalog today, or call 1-800-269-6653 for additional information.
