Progressive Expands Standard Components Offering for Global Production Tooling Market

New v12 Multi-Language Catalogue Set for Release at K 2019

DüsseldorfWarrington, UK – Progressive Components is a leading developer of components and web-based mould monitoring innovations.

Now at K 2019, new standards are being introduced:

- New CamActions® and UniLifters® for moulding and releasing undercuts.
- Z-Series™ Mould Alignment innovations for small, precision tooling.
- CVe Mould Monitor product line expansions, including capabilities for high-temperature moulds.
- Asset Tracking for moulds, dies, machines, and fixtures, for better control and maintenance throughout the plant.
- New CADalog offers designers convenient download options and expanded file format selections

“Every three years Progressive arrives at the K Show with introductions that become industry standards for those who build and provide maintenance to injection moulds,” states John Wakefield, Managing Director of Progressive Components Europe. “In addition to product innovations, we’ll also be introducing our new, multi-language catalogue. This collection of advantages features new standardised options for plate sequencing, routing cooling where previously not economical, and eliminating custom per mold machining with new ejection and alignment standards.”
