

In-Press Maintenance - OnDemand® and Cve Live®

Progressive's new Cve Monitor v3 tracks tool activity, allowing users to view data on the display or from comprehensive reports using OnDemand or the Cve Live System. Today, with our most recent upgrade, the Cve Monitor offers a vast array of tools to assist users with their Preventive Maintenance processes.

Customise and Record Maintenance Activities

The PM function allows for user-defined maintenance stops (incremental or absolute). Users can also create or customise PM forms and checklists for a specific maintenance program. In addition, users can now perform maintenance without having their laptop or computer physically near the Cve Monitor.

- Events are recorded by a series of button pushes by the user.
- Using the OnDemand Software, events are recorded direct from the Cve Monitor.
- Reports can be run to show when the PM occurred.
- In-Press Reminder Tags are available for mounting.

IN-PRESS MAINTENANCE

ACTION	INTERVAL		
	Shift	Day	Week
<input type="checkbox"/> Wipe Parting Line	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Grease Moving Parts	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Clean Vents	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

RECORD

CVe Live Preventive Maintenance Alerts

When PM checkpoints have been exceeded, the CVe Monitor enters the PM alert mode and displays both a wrench icon and PM Due on the screen. Once a PM is performed and recorded within OnDemand or via the in-mould actuation/button push combination, the next checkpoint for the PM will be written. If no PM is performed, the CVe Monitor will remain in PM alert mode until the user performs all PMs whose thresholds have been exceeded.
