

*“We spec only Progressive’s Ejector Pins.
 Their sizing is the industry’s most consistent,
 and where others’ gall, Progressive’s perform.”*

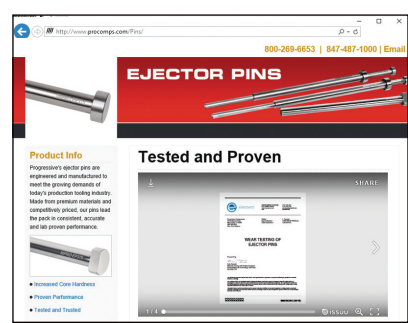

Steve Kieffer, Termax LLC

ENGINEERED FOR PRODUCTION

Molders can experience a high rate of mold downtime due to ejector pins failing. To eliminate this, turn to Progressive:

- Best surface finish and hardness for 420SS inserts
- No dishing or nicking due to a 48-50HRC core
- Consistent quality, no need to size holes for pins

Don't let inferior components bench your tools.
 Call Engineering at 1-800-269-6653 to discuss how the Progressive advantage can generate profits for you.
