

OnDemand Performance Summary Report

1. **Cycle Time Monitors** increases and decreases in Cycle Times and Activity versus defined targets
2. **Mold Data Panel** quickly identify the mold being viewed
3. **Service History** hours that your mold has been run and Lifetime Cycle Counts
4. **Tool Activity Panel** the cycle count of the most recent PM, Repair, Part Revision and General Query
5. **Productivity Graph** amount of downtime for your mold
6. **Cycle Time Graph** alerts change in cycle time
7. **Activity Graph** historical weekly cycle counts
8. **Maintenance Alert** when initial PM occurred and cycles until next PM is required
9. **Activity Tracking** displays when the tool received PM, repairs, part revisions and queries. Sessions in which a tool is operated beyond required maintenance levels are indicated with a change in the color of the bar. For example red indicates operation outside of the required PM limit.
10. **Temperature Overlay** shows the max temperature for that session.
